Dear Hiring Team at Pineapple Recruiting,

I am writing to express my interest in the QA Engineer - Test Automation position. With over five years of experience in mobile and web application testing, I am passionate about building high-quality, user-focused products and believe my skill set is a great match for your team.

In my most recent role at Payuca, I have been the sole QA professional since early 2022, leading all manual and automated testing for both mobile and web platforms. I developed automation frameworks using Java, TestNG, WebdriverIO, and Appium, and later focused on hands-on exploratory testing and usability validation as the product rapidly evolved. This experience has made me adept at working independently, collaborating with cross-functional teams, and ensuring on-time, high-quality releases.

Previously, I have also worked extensively with Java, Selenium, and both TDD and BDD frameworks (TestNG, Cucumber) for end-to-end automation. I am comfortable with tools like Postman, JMeter, and MySQL for API and performance testing, and I completed a Full-Stack Development course (React, JavaScript, Python, Bootstrap) to further strengthen my technical foundation. While English is my primary working language, I am actively learning German to better integrate into Austria's professional environment.

I am genuinely excited about joining a team that values quality and innovation. As part of my commitment to automation and continuous learning, I have developed and submitted this job application using a Playwright-based automation script. You can view the source code for this project at the following GitHub link:

https://github.com/QA-Master505/job-application-automation

Thank you for considering my application. I have attached my CV and would welcome the opportunity to further discuss how I can support your team.

Best regards,
Mustafa Muhammed
